

Towards a new level of certainty Devyser - Your post-transplant companion

We are pioneers in diagnostic kits and solutions for advanced DNA testing. Our goal is to eliminate tedious protocols and streamline laboratory workflows with simple, fast, and easy-to-use solutions. So all patients receive a correct diagnosis and faster treatment in the shortest time possible.

Our mission

Be the pioneering leader of diagnostic solutions and provide fast, accurate, and easy-to-use solutions to labs worldwide.

Our vision

A world where personalized medicine is universally available thanks to simplified and reliable genetic tests.

<45

Quickly detect graft rejection, disease relapse and minimal residual disease by tight monitoring

Reduce hands-on time

0.05%

High precision and sensitivity down to >0.05 percent

Screening for healthy lives

Ignorance should never be a cause of relapse in stem cell transplant patients. Post-transplant chimerism monitoring enables close evaluation of donor engraftment, rapid detection of graft rejection, and measurable/minimal residual disease.

Post-transplant monitoring using sensitive diagnostic tests offers invaluable insight when evaluating patient recovery. Regular testing maximizes the potential for post-operative success and enhances the patient quality of life.

What's our role?

We provide highly accurate and trusted chimerism test solutions that enable labs to quickly detect relapse and the potential presence of residual disease.

Our kits are custom-built to help physicians create the best conditions for successful patient outcomes and to streamline lab operations with a fast, smooth workflow.
